

## **PRESS RELEASE**

1<sup>st</sup> July 2009

### **HOLMER TERRA TRANSPORT**

HOLMER is now offering the TERRA TRANSPORT; a new cost effective alternative to tractor and trailer beet carting for sugar beet growers and contractors looking to increase output and reduce the soil impact of the harvesting process.

Based on used TERRA DOS sugar beet harvesters from around 1998/1999, the TERRA TRANSPORT is produced to order, fully factory refurbished and offered with a HOLMER factory backed warranty.

TERRA TRANSPORT offers outstanding wet weather performance and with its generous wheel equipment, mechanical axles and differential locks. The articulating chassis provides an in-field 'dog-leg' function; this dramatically reduces soil impact and leaves level fields in good condition ready for drilling. Wide tyres, (80cm fronts, 109cm rears), also help protect soil from wheel damage.

Modifications to the main drive gearbox and hydraulics provide reliable operation with a 25 km/h top speed on the field or on the road. Revised software reduces fuel consumption and enhanced control responses.

Other modifications are made to the sugar beet holding tank to improve its capacity to 20-tonnes and make loading and unloading easier and faster.

The donor HOLMER harvester lends itself well to this application as it features robust mechanical axles which provide a reliable service life long after the harvester's, and a rugged chassis which rarely gives problems.

The HOLMER TERRA TRANSPORT is priced at £79,000.00
